the official Quick Guide

Before you start

Check tyre pressure

Check the air pressure in your tyres regularly, ideally once a week. The air pressure should be within the range specified by the tyre manufacturer. Low air pressure increases driving comfort through better cushioning, while higher air pressure reduces rolling resistance and improves range.

Function test of the brake system

Before each ride, check that the brakes are working properly. Apply the brake levers and check that the vehicle (STRYVA^e) cannot be pushed any further. If the vehicle can still be moved despite the brakes being applied, the brake system must be professionally adjusted at a qualified workshop.

Battery level and range

Ensure that the battery is sufficiently charged to cover the desired distance with electric assistance from the MAHLE X30 motor. Regularly checking the charge level ensures a trouble-free riding experience.

Check lighting equipment (Commuter or Light Package)

Before setting off, check that all mandatory lighting equipment (headlights, rear lights, reflectors) is in working order and correctly fitted. If any lighting is defective, the vehicle may only be used during daylight hours and in good visibility conditions. Repairs should be carried out immediately.

Wearing a bicycle helmet

For your own safety, wearing a roadworthy and undamaged bicycle helmet is strongly recommended whenever you ride. The helmet should fit correctly, not slip, and be replaced in the event of a fall, even if there is no visible damage.

For further and detailed instructions and information, please refer to the **VELO DE VILLE original operating manual for the VELO DE VILLE STRYVA^e**.

My SmartBike App

The My SmartBike app from MAHLE supports you in using the STRYVA^e with helpful functions such as:

Journey information
Statistics
Fitness tracking
Engine performance

You can install the My SmartBike app on your smartphone via the [App Store](#) and [Google Play](#):

My SmartBIKE App in
the App Store

My SmartBIKE App
on Google Play
